## 16 In- and Outputs

The INFO-16Pr board belongs to the digital I/O modules. As all modules, it isservedoncepermillisecond, i.e. each input and output in the machine/plant is refreshed everyms.
The power supply of the outputs is divided into groups of 8 . This allows
various stop functions to be implemented. When the output power supply is switched off, the inputs can still be read in.
The board is also suitable for controlling low-speedstepping motorsupto 2 kHzor pulse width modulated DC motors.

## Technical Data

## Inputs

- 16 inputs
- $24 \mathrm{~V}, 5 \mathrm{~mA}$
- Isolated as group
- Maximum 4000 inputs per INFO-Link

## Outputs

- 16 outputs
- 24V, max. 2A
- Short-circuit-proof
- Isolated as group. Two separately supplied groups with 8 outputs each
- Maximum 4000 outputs per INFO-Link

## 24V power supply

- Power supply for proximity switches

## Stepping motor control

- Max. frequency 1 kHz

## Pulse width modulation

- Shaft speed control by pulse width modulation

## Status indication

- User-friendly indication of all inputs and outputs by LEDs.

Order No. INFO-16Pr 95208
(0)NDELAG

## INFO-16Pr

## Function

The INFO-16Prboard allows 16 inductive or ohmic loads such as relays, valves, various motors and other users with up to 2 A continuous load to be controlled. At the same time, 16 input signals from p -channels are registered.

The inputs are divided into one, the outputs into two groups. This allows stop functions according to EN60204-1 tobe implemented. The input and output groups are electrically isolated from the boardlogics.

The states of all inputs and outputs are indicated byLEDs. Per input, three connections are available ( $24 \mathrm{~V}, 0 \mathrm{~V}, \mathrm{INP}$ ), and per output two connections (OUT, 0 V ). This allows direct wiring of the sensors and users.

Up to maximum 250 INFO-16Prboards canbe connected with the INFO-Linkto the PC master. Atotal of 4000 inputs and outputs! Serial transmission is so fast that a board is served every $4 \mu$ s. In other words, in one millisecond all 250 INFO16 Pr boards are addressed.

Inthe event of power-off of the computer or of a rupture of the optical fiber, a watchdog will immediately switch off all outputs.

## LEDs on front panel

All inputs and outputs are through the front panel and are labeled there.

## LEDs on receiver module

LED-red $=\quad+5 \mathrm{~V}$ supply
LED-yellow $=$ INFO-Linkreceiver signal OK

## Jumper (green)

The jumper influences the light intensity of the emitting LED and thereby the segment length of the fiber cable up to the next board.

Segmentlength Jumper position

| $0 \ldots 10 \mathrm{~m}$ | nojumper |
| ---: | :--- |
| $8 \ldots 30 \mathrm{~m}$ | $>10$ |
| $20 \ldots 50 \mathrm{~m}$ | $>30$ |

## Jumper (light green)

If the sensors are to be supplied by the +24 V board power supply (pin $2,4 z$ ), the jumpers J5, J6 must be fitted. If the sensor supply is from an external source, it can be supplied anywhere to pins 2 ... 32b and 2 ... 32d (connector 2).

## Specifications

## Power supply

+18 ... 36V, 280mA max. (all I/Os active)

## Climatic conditions

- Ambienttemperature:

| Storage: | $-20 \ldots+80^{\circ} \mathrm{C}$ |
| :--- | ---: |
| Operation: | $0 \ldots+45^{\circ} \mathrm{C}$ |

- Boardtemperature:

Operation:
$0 \ldots+70^{\circ} \mathrm{C}$

- Relative air humidity

No condensation:
95\%

## Inputs

- 16p-channelinputs
(switch must pull to plus)
- Isolated as a group
- 24V,5mA
- Switching threshold: 10 V

## 24V supply

- Power supply for proximity switches
24V, max. 2A

## Outputs

- 16p-channelFEToutputs
- 24V, 1A continuous power (all outputs)
- Max. 2A per output (everyother output)
- Short-circuit-proof, thermal cutout of output stage
- Isolated as a group, two separately supplied groups with 8 outputs each.
- $R_{\text {on }}=110 \mathrm{~m} \Omega$
- Power dissipation:
$\mathrm{P}=1.8 \mathrm{~W} /$ board (16x1A)

## Installation

- Connector DIN41612,TypeF-48
- Installation in 19" chassis
- Dimensions:
$234 \times 100 \times 20 \mathrm{~mm}$ (LxWxD)
- 6HEx4TE

Customer-specific modifications are available at any time.

## INFO-16Pr

16 In- and Outputs

## Connections

## Board power supply

INDEL assemblies can be supplied from anEMC-compliant power supplyunit or fromasimple(3-phase)transformer rectifier circuit with an electrolytic capacitor of minimum 4700 uF . The 24 V supply must be through a line filter.

## Screened lines

All lines from andtotheINFO-16Prboard can be installed without screening.

## Grounding

The 16Pr board is grounded at the front panel. Take care to ensure that the rack housing is connected in a conductive manner with the control cabinet. This is bestachievedusing chromatized assembly bars to discharge interference.

See also INDEL wiring guidelines and INDEL design guidelines.

Connection Example

## 16 In- and Outputs

## Interfaces

## Wiring

## Outputs

## Inputs

Connection of input Inp-0 connector2.
The supply voltage for, say, contactless limit switches varies with the board supply between $+18 \ldots 36 \mathrm{~V}$.

## Outputs

Connection of outputs Out-0 connector 1
